WHAT may be the largest uncut precious stone in Australia will soon be chipped out of volcanic rock on a

property north of Armidale.

The precious stone is of opaline silica, weights between two and three tons, and is 34 million years

lt is a petrified tree trunk, believed to be the largest and best preserved specimen yet discovered in northern NSW.
About 50 per cent of the trunk is

agate, a hydrous form of silicate, used in making jewellery.
Cut up and polished, the trunk would be worth several thousand

dollars.
The Gem and Mineral Club hopes to make the trunk a tourist attraction for Armidale.

The trunk was discovered last

month by the owner of the property

when he hooked it with a plough. He described his find to Mr A.H Willott, who was surveying on the property for the Lands Department. For the past month, members of

the club have been excavating around the trunk at weekends.

They dug four feet down but then struck rock.

Club members have kept the location of the site secret so the trunk may not be spoiled by vandals, or precious stone enthusiasts chip-

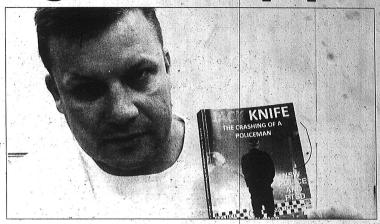

precious stone entitusiasts Chip-ping off pieces of agate. Two geologists from the University of New England, Professor G.M Philip and Dr R.A Bsinns, examined the tree trunk

They said a count of growth rings indicated the tree was about 100 years old when buried by lava.

They estimated the age of the

trunk to be 34 million years.

Nightmare on paper

WINDOW INTO LIFE AS A COP: Former police officer, Paul Horner, with his book which he says "gives the reader an insight into my life as a policeman and my demise thereafter".

PAUL Horner's job ultimately became his nightmare.

Now he is helping to ensure that others don't go down the came tradic tradic

that others don't go down the same tragic track.

Mr Horner, 38, is a former police officer with 11 years in the NSW Police Force, medical-ly discharged in April 2010 after a diagnosis of chronic Post Traumatic Stress Disorder (PTSD) and depression.

The illness was, he said, a

direct result of coping with the stress of being a fully opera-tional police officer, "living in a world offering a constant and relentless level of increasing violence."

relentless level of increasing violence."

"It came to the point where I just couldn't cope," he said.
"My job ultimately became my nightmare."

Today, two years later, while he manages his illness "to some gles with depression and "extreme nightmares."

One way of coping has been to write a book.
"The Crashing of a Policeman (NSW Police and PTSD)" tells the story of his career at some of the busiest and hardest police beats in NSW, with a range of stories from saving

people's lives to "almost losing

my own."

Mr Horner also talks of "the

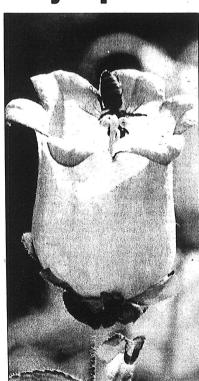

Mir Horner also talks of the failing of the system which I trusted and believed in."
"I want to help police and their families, who also suffer as a consequence of a copper's job," he said.

a consequence of a coppers job," he said.

At the same time, he wants the book to "put positive pressure on every police force in Australia to change their ways so that the engine room of the force is looked after the way in which they deserve and treated with respect."

Mr Horner's book is available through the publishers, www.zeus-publications.com, or emailing the author at crumb shorner@hotmail.com.

Key tips for life after rain in your garden

IN BLOOM: A Canterbury bell

GARDENS have been under considerable stress with recent continual rain resulting from the 'La Nina' weather pattern.
Although summer is draw-

Although summer is drawing to its calendar end it has been such a strange season and a warm spell could mean you need to turn sprinkler systems on.

Now is the time to take softwood cuttings
Agapanthus, Belladonna lilies and Hydrangea have finished blooming and now is a good time to spot non-

is a good time to spot non-Australian shrubs and bulbs for adding to your garden in the future

Choose the best plants for your area after observing and inquiring what is suited to your location as you can waste space with a plant in an unsuitable position. Don't locate flower or veg-

etable beds in shady spots, or within three metres of trees or in areas exposed to

trees or in areas exposed to wind.
Vegetable beds are best running north to south. If you want early onions, start sowing seeds now.
URGENT
* Pake up oorby leaf (20)

UNGENT

* Rake up early leaf fall and use in your compost bin

* Refer to vegetables list for planting before it gets too cool to plant.

* Keep vegetables moving with liquid manure or fertiliser.

Prune shrubs that have

Your garden

The expert **Ray Monty**

finished flowering, also pelargoniums.

* Look under leaves for

greyish powdery mildew on cucumbers, squash, etc. Spray with fungicide. PROPAGATING SOFT-WOOD OR HALF-RIPENED CUTTINGS

Raising your own plants from cuttings is not as hard as you may think.

And exchanging bits and pieces with friends is pleasant as well as economical. Hardwood cuttings are propagated in winter but softwood or 'half-ripened wood' is available now.

It's quite easy using liquid.

It's quite easy, using liquid or powder growth-promot-ing substances, to speed up the formation of roots.

For the home gardener,

plastic covers/bags will keep the leave surfaces con-stantly moist.

Place the containers in a well-lit spot and make sure

drainage is good.
Softwood cuttings: Cut
the top two to three centre metres of a rapidly growing shoot, remove most of the lower leaves and firm half the length in a potting mix with perlite or polystyrene. Take care not to let cuttings

You can propagate Erica, Penstemon, Fuschia and Coleus quite rapidly this

way. Try Callistemon and Leptospermum. Half-ripened cuttings: Take ripened cuttings: lake shoots that have stopped growing and woody; cut pieces five to eight centre metres and bury half length

metres and bury half length in your potting mix. This method is generally used for conifers, fibrousrooted begonias, carnations and pinks, geraniums, the various daisies, hydrangeas, correas, grevilleas and melaleucas.

Cuttings must never be allowed to dry out. When they have produced a good root system and newly shot leaves, transplant them into the garden or into pots on a scool-ish day and water well.

MID FEBRUARY NOTES

Flowers are fading so get around to see other gardens before it's too late!

Observe the best plants in your area for the end of the your area to the season and note them for future use. Choosing the right plant is essential — don't waste time and effort on a plant that just won't

thrive.

With the approach of autumn many plants are storing up food and energy for their dormant period and the flush of new growth in spring. Seasonal winds may damage trees and shrubs so you should prune out any broken branches and cover with a wound-dressing paint.

with a wound-dressing paint.
Bulbs: The last of
Agapanthus have bloomed
and bulbs now go into their
dormant period. Order your
bulbs from various catalogs

now.
FLOWERS AND VEGETABLES TO PLANT
Flowers: Seeds: alyssum, calendula, Canterbury bell, delphinium, gypsophila, larkspur, lupin, pansy, stock, sweet pea, wallflower.
Seedlings: alyssum, delphinium, dianthus Vegetables: Seeds: beet-

Seedings: alyssum, del-phinium, dianthus Vegetables: Seeds: beet-root, broccoli, cabbage, cauliflower, lettuce, leek, white onion, silver beet, spinach. Seedlings: broc-coli, cabbage, celery, leek, silver beet.
